

## **ENVIRONMENTAL POLICY DECLARATION**

One of the essential elements that inspire the INSTACLACK INTERNACIONAL policy is the commitment for the environmental protection in all the actions.

For this reason, the INSTACLACK INTERNACIONAL manager has decided to publish his environmental action principles in order to guide and inspire the activities of all the company staff and at the same time to manifest our public commitment with the sustainable development.

Since our company establishment, we have followed an environmental conservationist policy using the latest technology products with a minimum environmental repercussion.

INSTACLACK INTERNACIONAL has always committed for taking care the environment, planting trees in the warehouse courtyard, installing photovoltaic panels, changing the swelling agent using hydrocarbon, using the sunlight instead artificial light, recycling paper...

The INSTACLACK INTERNACIONAL environmental policy is inspired in two essential principles: fulfilling the environmental regulation applied and the continuous improvement of the development activities with the aim to protect the environment.

To put into practice both principles, the INSTACLACK INTERNACIONAL management propose:

- To adopt the necessary measures to prevent contamination and when it is not possible, reduce the contaminant emissions to a minimum.
- To reduce the waste systematically, recycling and reusing when it is possible, at the same time we use the natural resources, raw materials and energy efficiently.
- To establish procedures to check the fulfilling of the environmental policy, like the application of the correct measures in front of the non-fulfilment detected.
- To establish an emergency plan in case there is an accident that can affect the environment.
- To define and check the objectives periodically and environmental establish aims in compliance with this environmental policy, inside the continuous improvement process in our action.
- To spread the environmental policy between the employees, suppliers, subcontract people, and other interested parties.
- To form and make aware our employees about all possible environmental aspects that can be generated, make them participate about the respect of our policy in all their activities.
- To maintain up to date an environmental management system suitable to the nature, magnitude and environmental impacts of our activities and services.

Martorelles, 16<sup>th</sup> of October 2009.

Jordi Costa Padrós  
Managing director.
